

DENON DCD-900NE

CD Player with Advanced AL32 Processing Plus and USB

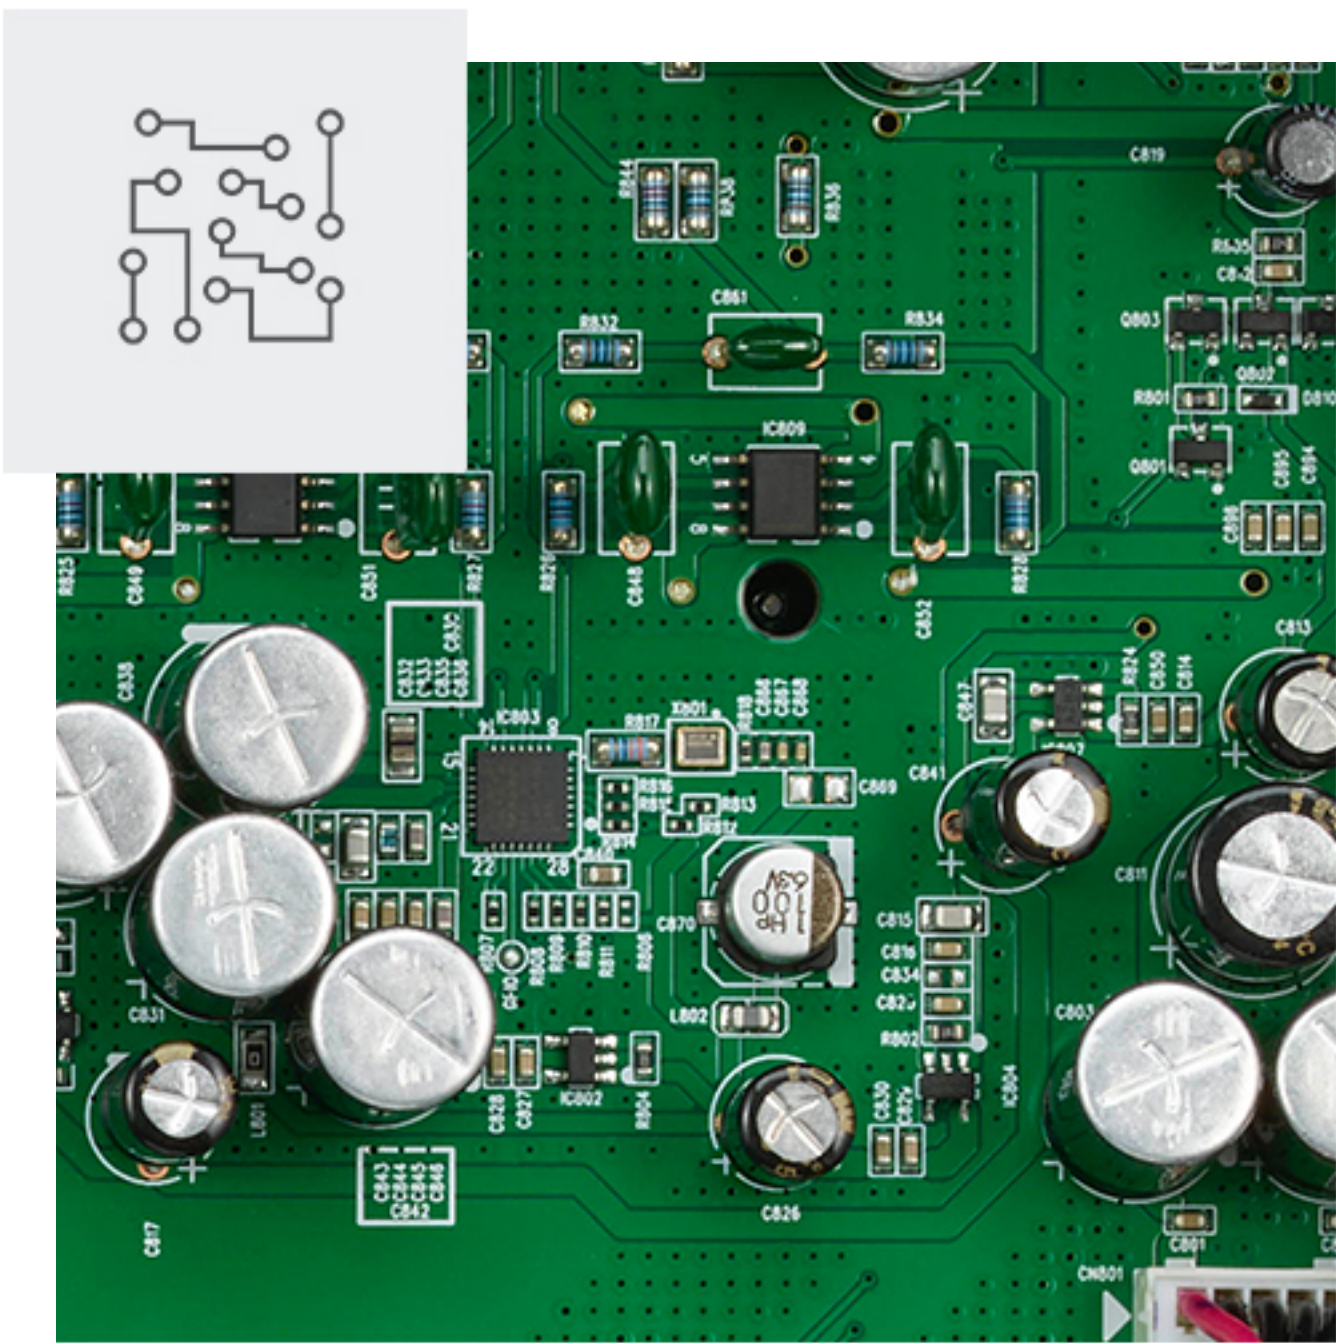

CD, CD-R/RW, MP3, WMA, and USB supported

Enjoy excellent audio from your CD and modern high-resolution audio collection with the support of DSD 2.8 MHz/5.6 MHz, FLAC, WAV, AIFF, and ALAC via the USB input.

Advanced AL32 Processing Plus

Advanced AL32 Processing Plus and an Ultra-Precision 192kHz/32bit D/A Converter ensures accurate playback that's faithful to the original recording.

DAC Master Clock design

A clock placed immediately adjacent to the DAC perfectly synchronizes digital circuits, suppressing jitter and ensuring optimal precision in D/A conversion for unaltered audio.

Tested and tuned for outstanding audio

Backed by a more than 110-year legacy of designing premium audio components, the DCD-900NE has undergone rigorous testing and tuning to deliver lasting outstanding performance.

Designed to reduce vibration and interference

DCD-900NE is built for improved sound. The power transformers are fitted near the bottom and immediately above the insulators to prevent unwanted vibration, resulting in pristine sound that meets Denon standards. The mechanical chassis has been enlarged to increase the physical separation between the different audio and digital boards, reducing potential digital noise interference.

Built to last

The overall aesthetic, sound quality, and design integrity of DCD-900NE and its hi-fi components are built to last.
